PROFESSIONAL SUMMARY

Detail-oriented Computer Science Engineering student with hands-on experience in data analysis, Python-based automation, and building data-driven applications. Proven ability to design and deploy reporting systems, conduct root-cause analysis of quality defects, and communicate insights clearly. Passionate about leveraging data to drive process improvements and operational excellence — aligned with Amazon's ICQA mission.

CORE COMPETENCIES

Data Analysis:	Data mining, root-cause analysis, inventory quality reporting, trend analysis, Excel dashboards
Tools & Software:	Microsoft Excel (pivot tables, VLOOKUP, charts), SQL, Google Colab, VS Code, Pandas, Matplotlib
Programming:	Python, Java, C++, JavaScript, SQL
AI / ML:	CNN, Computer Vision, OpenCV, Image Processing, OpenAI API
Web Technologies:	Streamlit, HTML5, CSS3, JavaScript (ES6+), Front-end Development
Soft Skills:	Team leadership, training & coaching, written/verbal communication, process compliance

PROJECTS

Inventory & Sales Analytics Dashboard | Data Analyst Project, Independent Jan 2026 – Feb 2026

- Collected and cleaned a real-world e-commerce dataset (10,000+ records) using Python (Pandas, NumPy) to identify patterns in inventory adjustments, order defects, and fulfillment delays.
- Performed root-cause analysis on quality defect categories — identified top 3 defect drivers contributing to 68% of total adjustments; presented findings using Matplotlib and Seaborn visualisations.
- Built an automated Excel-compatible report (CSV + pivot-ready output) summarising daily/weekly inventory quality metrics — structured to mirror operational reporting workflows used in warehouse analytics.
- Documented analysis process end-to-end with a written findings report, simulating the publish-and-communicate cycle central to the ICQA Research Analyst function.

KrushAI: AI-Powered Plant Disease Detection | Team Lead (6 members), Dec 2025 – Present Sanjivani University

- Engineered a CNN model to detect pomegranate leaf diseases from image data; applied OpenCV for preprocessing and noise reduction — directly analogous to quality defect identification from data inputs.
- Owned end-to-end ML pipeline: collected and cleaned datasets, tracked model accuracy metrics, and iterated based on defect patterns — mirrors daily quality defect research and root-cause analysis in ICQA.
- Led a cross-functional team of 6, divided development phases, conducted progress check-ins, and ensured on-time delivery — applicable to stand-in Area Manager and skill huddle facilitation.
- Built a real-time Streamlit dashboard to surface diagnostic outputs — equivalent to preparing and publishing daily/weekly reports for stakeholder consumption.

Jarvis AI Assistant | Lead Developer, Independent Nov 2025

- Designed and deployed a voice-activated assistant using OpenAI GPT-4 API for multi-turn task automation across Android and Desktop — demonstrated ability to integrate and synthesise data from multiple sources.
- Managed full project lifecycle: requirements, development, testing, and release — reflecting self-driven research and reporting capabilities.

E-commerce & Portfolio Platforms | Front-end Developer, Independent Apr 2025 – May 2025

- Built a dynamic e-commerce platform with product listing and cart state management — directly relevant to inventory quality monitoring and adjustment tracking.
- Designed a responsive portfolio website with clean UI/UX, demonstrating attention to documentation and process clarity — applicable to process compliance audit work.

EXPERIENCE

Android & Front-End Designer | Independent Developer, Remote

2024 – Present

- Developed and maintained Python-based projects; consistently delivered working software against self-set milestones and quality benchmarks.
- Produced documentation and UI designs for web/mobile platforms, communicating technical findings clearly — mirrors quality feedback and associate training responsibilities.
- Contributed to open-source projects, collaborating across distributed teams — relevant to coordinating with process associates and area managers.

EDUCATION

B.Tech, Computer Science & Engineering | Sanjivani University, Maharashtra, India

2024 – 2028 (Expected)

GPA: 8.9 / 10.0

Higher Secondary Certificate (Class XII) | NPMHS (MHSB), Maharashtra, India

2024

Percentage: 71.00%

ACHIEVEMENTS & CERTIFICATIONS

- Secured 2nd Position — University-level Web Development Hackathon (competitive problem-solving and delivery under pressure).
- The Joy of Computing using Python — NPTEL (With Distinction): Strong foundation in Python data processing and algorithmic thinking.
- Java Programming for Beginners — Simplilearn: Certified programming proficiency across multiple languages.
